

Unreliable reported figures trace to a fully manual data chain that leaks at every hand-off

Fragmented sources and manual roll-ups produced compliance numbers leadership could not trust. Four drivers, each rooted in specific, fixable breakpoints, explain the gap.

THE CORE PROBLEM

CORE PROBLEM

Reported compliance figures cannot be trusted

The totals sent for reporting are only as reliable as the data feeding them.

Total

Completed

Pending

Uncontactable

4 METRICS · ALL UNRELIABLE

PRIMARY DRIVERS

01 · INTAKE

Fragmented intake

02 · CONSOLIDATE

Manual consolidation

03 · RECONCILE

Broken reconciliation

04 · REPORT

Untracked reporting

ROOT CAUSES · WHERE THE DATA LEAKS

ROOT CAUSE Inconsistent formats across every source feed	Duplicate records as one registrant arrives via multiple channels	Partial details buried in free-text email and SMS replies
ROOT CAUSE Files scattered across many shared-drive folders, one per team	Role-gated access; each team uploads only its own slice	Emailed copies create uncontrolled version sprawl
ROOT CAUSE Serial numbers do not reconcile across systems	Resale severs the serial-to-owner link	Disputed units escalate to Legal and stall
ROOT CAUSE Status counts drift between spreadsheet versions	Manual roll-ups carry no audit trail	Stale data feeds the final reported figures

RECOMMENDATION

Replace the manual chain with a single dashboard-backed view of every breakdown

–15% CYCLE TIME

Systems in play: Excel · Microsoft 365 · SAP Business One · in-house portal · BI dashboard.
